

Stock Control ^{••} is a cloud-based medicine management web application that helps Urgent Care providers **manage** and **audit** their stock cupboards across multiple sites.

Collate stock levels, requests, orders, and deliveries all in to one central space.

Calculate usage based on previous stock levels and audited stock movement.

Where can Stock Control be used?

Manage stock wherever it is located across the organisation.

UTC WIC Cars Cupboards/boxes Surgeries

Flexibility to define multiple operating entities to reflect centralised ordering with distributed storage locations.

What are the benefits of Stock Control?

Audits can be done by operations staff in the stock cupboards and added directly or uploaded later.

- \succ Accurate tracking of stock automatically generates the re-order quantities to be sent to supplier.
- Cost saving tracking stock automatically reduces waste from expired stock.
- > Visibility of stock usage via reporting mechanism.
- > Ability to move and track stock round various locations.
- Adjust stock for periods of high demand.
- System can also track consumables.
